

INTRODUCING The Hydroscreen Rainwater Harvesting Filter System.

Hydroscreen has developed and patented the perfect solution for filtering the water from gutter and downspout collection systems.

Utilizing proven wedge-wire screen technology it is possible to easily remove debris and sediments larger than 150 microns before the water is fed to storage tanks.

The units are self-cleaning, easy to install and cost effective.

Units are sized to accommodate domestic and industrial applications with flow ranges up to 1,000 gallons per minute.

The units are available in 304 stainless steel and PVC to be compatible with any architecture.
